

Platinum XLT[®] and XVR Anilox

Print Quality Predictability Guarantee

Harper fully guarantees that your print quality will meet or exceed your expectations when our Harper Graphic Solutions™ team is involved in helping to develop anilox volumes and line screen specifications.

Should our recommendations not meet your expectations, we will correct the volume or cell count, or both, at no additional cost to you; or, as dictated by the printed result shortcomings, we will invest the needed time to work with other suppliers or to train your personnel, in order to create the collective system solution(s) required to achieve the quality, profitability and predictability levels desired for specific orders or print jobs.
